PROJECTS

ANALYSIS ON BENEFITS AND COSTS OF MACHINE LEARNING-BASED EARLY HOSPITALIZATION PREDICTION

Addressing global ED overcrowding through early patient hospitalization prediction using machine learning models, assessing their impact on ED and ward operations for improved healthcare efficiency.

- This study explores early hospitalization prediction's potential to streamline ED patient care, reduce boarding times, and improve overall hospital efficiency.
- By leveraging machine learning techniques and quantitative analysis, the research aims to identify effective models while assessing their impact on EDs and wards in reducing patient length of stay.

Technologies used: Windows 10, XAMPP Server, HTML, CSS, JavaScript, Python, PyCharm, Django.
