PROJECTS

Crime Management System

- Built with Python and MySQL, the Crime Reporting Web Application empowers users to swiftly report criminal activities through an intuitive online interface.
- Python drives the application's functionality, while MySQL securely stores the data. This system enhances law enforcement's ability to access, analyze, and respond to crime reports efficiently

Depression Detection System

- The Depression Detection Web Application, developed using Python, MySQL, and Django, serves as a user-friendly platform for assessing and identifying potential cases of depression.
- Users complete depression assessment questionnaires, and receive informative results, aiding them in understanding their mental well-being.
- The application utilizes Django's robust framework for seamless user interaction and data processing.

E commerce site

- This web site is developed by using python,MySQL,JavaScript,HTML,CSS, and Flask
- This web site is designed for Ali Amir Mahammed AL Kathaeeri Trad .CONT.EST shop
- This is a user Friendly Website

EXPERIENCE

Python Django Developer

Inmakes Infotech Pvt. Ltd   June 2023 to sep 2023

- Python Django developer
- I actively participated in diverse stages of web application development, including design, coding, testing, and deployment. Working within a skilled team, I refined my troubleshooting skills and gained hands-on experience in database management, user authentication, and dynamic content integration.
- This internship enhanced my proficiency in Python and Django to create effective and user-oriented web applications.

ADDITONAL CERTIFICATES

NPTEL - PYTHON
